

Sanso EvOne 3-in-1 Ceiling Mounted Air Purifier, Ioniser and Multi-Functional Light in White

SKU: 089200

$399.00 (inc GST)

Details

Sanso EvOne Ceiling-Mounted HEPA13 Air Purifier & Multi-Functional Light in White

The air purifier built into your ceiling light.
Sanso EvOne — an innovative Australian-designed ceiling light with integrated **HEPA13 air purification**, intelligent air-quality sensing and adaptable Day, Night and Sleep lighting.
Mounted neatly on the ceiling, Sanso filters and circulates air around the room without taking up valuable floor or furniture space — and without directing a constant stream of air onto the people below.
Ideal for **bedrooms, home offices and smaller rooms up to 12m².**

HEPA13 AIR PURIFIER	UP TO 12m²	SMART AIR SENSOR	DAY + NIGHT LIGHT

Cleaner Air, Without Another Appliance

Traditional air purifiers need somewhere to sit. Sanso EvOne takes a different approach.
By integrating an air purifier into a beautifully considered ceiling light, Sanso helps filter and circulate the air in your room while keeping floors, bedside tables and furniture free from another appliance.
It's a smarter way to bring air purification into bedrooms, home offices and smaller spaces where every centimetre counts.

HEPA13 Air Purification

At the heart of Sanso is a custom-designed, replaceable **HEPA13 filter** that helps capture fine airborne particles including dust and pollen as air passes through the unit.
With a Clean Air Delivery Rate of **100m³/h**, Sanso is recommended for optimal air purification in rooms up to **12m²**.
Air is continuously drawn through the filtration system before being circulated back throughout the room while the purifier is operating.

Air Circulation Designed for Year-Round Comfort

Sanso was designed to do more than simply filter air — it was designed to circulate it comfortably throughout the room.
Rather than blowing air directly down onto the person below, Sanso **draws air in through the front of the unit and directs filtered air out through the sides**. This creates gentle circulation around the room while helping avoid the direct downward draught associated with traditional ceiling fans.
It's a concept similar to the way **winter mode on a ceiling fan** is used to circulate air throughout a space rather than create a strong cooling breeze directly below.
The result is an air purifier designed to be useful **all year round** — whether you're sleeping beneath it, working at a desk or simply relaxing in the room.

Smarter Air, Automatically

You shouldn't have to constantly think about your air purifier.
Sanso's built-in air-quality sensor monitors the surrounding air and allows the purifier to automatically adjust its operation as conditions change.
Simply select **Auto Mode** and let Sanso do the thinking for you or use the included remote control to choose the setting that suits your space.
Choose from:

Auto Mode
Three fan speeds
Timer settings
Burst Mode – A quick 15-minute burst of High-Speed filtration.
Sleep Mode – Turns off the indicator light and runs at the lowest speed for 8 hours for a restful night's sleep.

Made for the Bedroom

Sanso is particularly well suited to bedrooms.
Because the purifier is integrated into the ceiling, there's **no bulky appliance beside the bed, no floor space lost and no additional visual clutter.**
Its unique sideways air circulation also means filtered air can move around the room **without being blown directly down onto you while you sleep.**
On its lowest fan speed, Sanso operates at **as low as 36dB**, while Sleep Mode reduces the fan speed and switches off indicator lights to create a quieter, less distracting environment overnight.
And because Sanso also functions as your room light, one beautifully integrated fitting performs multiple roles within the space.

Light for Day, Night and Sleep

Sanso features Beacon's **Live Well Day Night Sleep lighting**, giving you adaptable light for different times of the day.
Use brighter light when you're working, getting ready or starting

the day, transition to warmer light as evening approaches, or select the gentle Sleep lighting setting when it's time to wind down.
It's intelligent lighting and air purification brought together in one considered ceiling-mounted solution.

More Than Just a Filter

Alongside its HEPA13 filtration system, Sanso also features an integrated **ioniser** designed to work together with the purifier's filtration and air-circulation system.
With three fan speeds plus dedicated Auto, Burst and Sleep modes, you can tailor Sanso's operation to suit the room and the way you're using it.

Your Ceiling Light Could Do More

Most ceiling lights have one job.
Sanso combines **room lighting, HEPA13 air purification, air circulation and intelligent air-quality monitoring** into a single ceiling-mounted product.
That means filtered, circulating air without introducing another appliance into your interior.

Designed in Australia. Recognised Around the World.

Developed by Beacon Lighting's Australian in-house design team, Sanso EvOne has received international recognition for its innovative combination of design, technology and functionality.
