DESCRIPTION

Thermastrip outdoor 2 pack extension rod mounting bracket for use with Thermstrip extension rods

As there is typically constant air movement in an outdoor or open indoor area, many conventional patio heaters rely on convection heating which works by heating the surrounding air. This can be quite impractical for these areas, as this heated air can easily blow away with natural air movement. Radiant style heaters transfer heat directly to objects through infra-red waves. Whilst convection heaters heat the air in between objects, radiant heaters heat the surface of the objects themselves. THERMASTRIP electric radiant heaters are more effective within an outdoor or uninsulated indoor area because they provide targeted warmth directly to the people and objects in their path. Discrete, stylish heating for undercover outdoor and indoor open areas Using the radiant heating principle, THERMASTRIP can provide effective and energy efficient comfort heating for undercover outdoor and indoor open areas. THERMASTRIP has successfully enabled many entertainment venues such as restaurants, pubs and clubs to utilise their outdoor dining areas day and night, through all seasons. Within your workplace or business, THERMASTRIP can provide comfort heating for designated outdoor smoking and leisure areas, as well as for workstation spot heating in factories, warehouses and showrooms. Within your home, THERMASTRIP can provide comfort heating for undercover alfresco dining and BBQ areas, patios, verandas, courtyards and balconies. Subtle, minimalist design The stylish, slimline black face of the THERMASTRIP does not emit light or glow when in use, blending elegantly into your décor. Ceiling, wall and umbrella mounting options ensure that your valuable floor and table space is not wasted. [Click here](#) for installation instructions.
